Heavy hexagon nut MF

Zware zeskantmoer MF / Écrou hexagonal lourd MF

ASME ≈B18.2.4.6M
ASTM A194M

Technical Data

d	F	H
M30	46	30
M33	50	33
M36	55	36
M39	60	39

- WAF deviate from ASME B18.2.4.6M and are in accordance with DIN 934. Depending on availability, nuts may be supplied with the larger WAF to ASME B18.2.4.6M.

22445 Heavy hexagon nut MF / Zware zeskantmoer MF / Écrou hexagonal lourd MF

G09A

Thread Metric fine thread
Material Steel ASTM A194M
Class Gr.2H
Surface treatment Plain

1.3/8	2.3/16	34.1	8	3 Inch	4.5/8	75.0	8

- Tolerances of the total length of the studbolts according to ASME B16.5 Table C-3
- L is the nominal length of the studbolt, measured from the first to the last full thread and thus excluding the chamfered ends.

22090 Studbolt with 2 heavy hexagon nuts / Studbolt met 2 zware zeskantmoeren / Goujon fileté avec 2 écrous hexagonaux lourds **G09A**

Thread 8 Unified National
Material Steel ASTM A193 - ASTM A194
Class Gr.B7 - Gr.2H
Surface treatment Plain

22082 Studbolt with 2 heavy hexagon nuts / Studbolt met 2 zware zeskantmoeren / Goujon fileté avec 2 écrous hexagonaux lourds

G09A

Thread Unified National Coarse
Material Steel ASTM A193 - ASTM A194
Class Gr.B7 - Gr.2H
Surface treatment Zinc plated

22325 Studbolt with 2 heavy hexagon nuts / Studbolt met 2 zware zeskantmoeren / Goujon fileté avec 2 écrous hexagonaux lourds

Thread Unified National Coarse
Material Steel ASTM A320 - ASTM A194
Class Gr.L7 - Gr.7
Surface treatment Plain

- ATTENTION: when ordering studs according to this DIN standard the proper designation is $d \times L$, e.g. stud M10X70 - DIN 938, where the working length $L = 70$ mm and the thread length on the metal end $b_m = 10$ mm. The overall length of the stud is $70 + 10 = 80$ mm. The thread length on the nut end $b = 26$ mm.
- The thread tolerance class on the metal end is $Sk6$ according to DIN 13-51, meaning "transition fit", which prevents loosening of the metal end of the studs during disassembly.
- In case this transition fit is not wanted, add "Fo" in the designation. These studs have thread tolerance class 6g on both ends and can be supplied as specials.
- Studs according to DIN 938 with a metal end $\approx 1d$ have many applications, but are mainly intended for use in steel counterparts.

- ATTENTION: when ordering studs according to this DIN standard the proper designation is d x L, e.g. stud M10X70 - DIN 938, where the working length L = 70 mm and the thread length on the metal end b_m = 12 mm. The overall length of the stud is 70 + 12 = 82 mm. The thread length on the nut end b = 26 mm.
- The thread tolerance class on the metal end is Sk6 according to DIN 13-51, meaning "transition fit", which prevents loosening of the metal end of the studs during disassembly.
- In case this transition fit is not wanted, add "Fo" in the designation. These studs have thread tolerance class 6g on both ends and can be supplied as specials.
- Studs according to DIN 939 with a metal end $\approx 1,25d$ have many applications, but are mainly intended for use in cast iron counterparts.

Technical Data

d	b = L-(x+3) up to L _S	b: L ≤ 125mm	b: 125mm < L ≤ 200mm	b: L ≥ 200mm	b _m	P	x
M5	20	16	22	-	10	0.80	2
M6	20	18	24	-	12	1.00	2.5
M8	25	22	28	-	16	1.25	3.2
M10	28	26	32	45	20	1.50	3.8
M12	35	30	36	49	24	1.75	4.3
M16	45	38	44	57	32	2.00	5

- ATTENTION: when ordering studs according to this DIN standard the proper designation is d x L, e.g. stud M10X70 - DIN 835, where the working length L = 70 mm and the thread length on the metal end b_m = 20 mm. The overall length of the stud is 70 + 20 = 90 mm. The thread length on the nut end b = 26 mm.
- The thread tolerance class on the metal end is SK6 according to DIN 13-51, meaning "transition fit", which prevents loosening of the metal end of the studs during disassembly.
- In case this transition fit is not wanted, add "Fo" in the designation. These studs have thread tolerance class 6g on both ends and can be supplied as specials.
- Studs according to DIN 835 with a metal end $\approx 2d$ have many applications, but are mainly intended for use in aluminium alloy counterparts.

Stud metal end $\approx 1,25d$ BSW

Tapeind inschroeflengte $\approx 1,25d$ BSW / Goujon longueur d'implantation $\approx 1,25d$ BSW

4

Technical Data

d	b	e $\approx 1,25d$	Threads per inch	d	b	e $\approx 1,25d$	Threads per inch
5/16	18	10	18	5/8	28	20	11
3/8	20	12	16	3/4	32	25	10
1/2	25-30	16	12	1 inch	40-55	35	8

- Whitworth thread (BSW) is not internationally recommended. It is advised to use metric (M) thread instead.
- ATTENTION: when ordering these studs the proper designation is $d \times L$, e.g. stud 5/16X25, where the working length $L = 25$ mm and the thread length on the metal end $e = 10$ mm. The overall length of the stud is $25 + 10 = 35$ mm. The thread length on the nut end $b = 18$ mm.
- The thread on the metal end is made with a "transition fit", which prevents loosening of the metal end of the studs during disassembly.
- These studs, with a metal end $\approx 1,25d$, have many applications, but are mainly intended for use in cast iron counterparts.

Safety swing hook with wood screw thread

Veiligheidsschommelhaak met houtschroefdraad / Crochet de balançoire de sûreté non-métrique

Technical Data

d	b	d ₁
10	45	9.5
11.8	55	11.5

Assembly data

- Safety swing hooks must be screwed in sufficiently so that the threaded shank is completely invisible.
- Safety swing hooks must be transversely assembled to the swingdirection (this causes the ring to roll and not to slide, consequently reducing wear to minimum)
- Safety swing hooks and ring must be greased regularly!
- Extensive assembly data in each packaging of safety swing hooks

Hexagon head thread cutting screw

Zelfdraadsnijdende zeskantbout / Vis autotaraudeuse à tête hexagonale

DIN 7513 A

Technical Data

d	Drill ø (H11)	k	P	s
M4	3.6	2.8	0.70	7
M5	4.5	3.5	0.80	8
M6	5.5	4	1.00	10
M8	7.4	5.3	1.25	13

- Drill ø (H11) = The given boring diameters are guide lines for materials of medium strength.
- For thin-walled workpieces or workpieces made from soft materials, a smaller core hole diameter, for thick walled workpieces or workpieces made from hard materials a larger core hole diameter may be chosen.
- It is recommended that the exact diameter selection is made on basis of tests.
- The depth of engagement should not exceed 2 d.

Cross recessed raised countersunk head tapping screw

Bolverzonken plaatschroef met kruisgleuf / Vis à tôle à tête cylindrique fraisée bombée à empreinte cruciforme

DIN 7983
ISO 7051
NF E25-657

Self-drilling cross recessed countersunk screw with wings

Zelfborende verzonken schroef met vleugels en kruisgleuf / Vis auto-perceuses à tête fraisée à ailettes à empreinte cruciforme

Technical Data									
d	A	B	C	D	d _k	E	L ₁ ≈	No. cross recess	P
ST4.2	7500	3500	5	0.7	8.1	2	9	2	1.40
ST4.8	11000	6000	8.5	2	9.5	3	10	2	1.60

- A = Breaking load min. in N.
- B = Shear strength min. in N.
- C = Ultimate moment in Nm.
- D = Drillcap. in steel cross cross members St37 (min.).
- E = Drillcap. in steel cross cross members St37 (max.).
- Applicable for direct-assembly of soft wooden beams on steel cross members.
- Max. grip length KL = L - L₁.
- St37: With higher steel qualities the max. drilling thickness is reduced.

Special features of FABORY-SPEDEC self-drilling screws type 3C:
 - with underhead ribs for countersinking in wood

ST6.3	17000	10000	16	3	12	6	3	6	25	1.80	T30

- A = Breaking load min. in N.
- B = Shear strength min. in N.
- C = Ultimate moment in Nm.
- D = Drillcap. in steel cross cross members St37 (min.).
- E = Drillcap. in steel cross cross members St37 (max.).
- F = Drillcap. in steel cross cross members St52 (min.).
- G = Drillcap. in steel cross cross members St52 (max.).
- Applicable for direct-assembly of soft wooden beams on steel cross members.
- Max. grip length KL = L - L₁
- St52: With higher steelqualities the max. drilling thickness is reduced.

Special features of FABORY-SPEDEC self-drilling screws type 3ICT:

- the normal drilling point has been replaced by a drilling plate of special hardened steel. This type ensures, when the SC self-drilling screws cause problems, that the area of application can be extended considerably
- in one single operation: start of assembly, drilling through wood, drilling through steel, wings breaking off, forming thread, tightening screw, assembly finished (see assembly sequence)
- assembly with electric setting tool type type CF 250(P), see group codes 31570 (31572).

- Applicable for direct-assembly of soft wooden beams on steel cross members.
- Max. grip length KL = L - L₁
- St37 With higher steelqualities the max. drilling thickness is reduced.

Special features of FABORY-SPEDEC self-drilling screws type SC:

- with preformed drilling point
- with under head ribs for countersinking in wood
- assembly with electric-screwing tool type type CF 250(P), see group codes 31570 (31572)

Specific features HECO-FIX PLUS screws for chipboard:

- Reduction of required drive torque of up to 30%.
- Easier handling.
- Substantially higher screwing performance on using storage battery screw drivers.
- Axial forces are reduced, thereby less wear of screw driver bits.
- By means of the tooth geometry, a higher unscrewing moment is nevertheless, achieved and consequently, a secure screwed connection is obtained.
- Warning: electro-galvanizing of these products may cause hydrogen embrittlement.

51770	Cross recessed raised cheese head screw for chipboard Pozidriv / Bolcilinder spaanplaatschroef met Pozidriv kruisgleuf / Vis pour aggloméré à tête cylindrique bombée à empreinte cruciforme Pozidriv		R03A
Material	Stainless steel A2

Cross recessed dry wall screw

Gipskartenschroef (snelbouwschroef) met kruisgleuf / Vis pour plaques de platre à empreinte cruciforme

Technical Data		
d	dk	No. cross recess
3.5	8.5	2
3.9	8.5	2
4.2	8.5	2
4.8	8.5	2

Special features of dry wall screws:

- suitable for fastening of gypsum plasterboard on framework of every type of wood or metal up to 0,75mm thickness.
- the trumpet (bugle) shaped head countersinks in such a way that it can be easily covered and leaving no visible protruding spot.

31310	Cross recessed dry wall screw with two-start thread (fine) Phillips / Gipskartenschroef (snelbouwschroef) dubbelgangige schroef-draad met Phillips kruisgleuf / Vis pour plaque de platre à empreinte Phillips cruciforme avec filet à double chanfrein			J11A
Material	Steel			
Surface treatment	Phosphated

Cover for cross recessed countersunk head screw for chipboard

Afdekkap voor verzonken spaanplaatschroeven met kruisgleuf / Capuchon pour vis pour aggloméré à tête fraisée à empreinte cruciforme

6

- Special features for covers for cross recessed countersunk head screws for chipboard Pozidriv:
- Prevent corrosion and dirt accumulation in the recess.
- Neat appearance.
- Easy to assemble.
- Re-useable.

53460 Serrated lock washer with external teeth / Tandveerring met gesloten buitenvertanding / Rondelle élastique à dents chevauchantes extérieures **R45A**

Material Stainless spring steel A5 (1.4571)

For nom. size	☒	Art.number	For nom. size	☒	Art.number
M6*	1.000	53460.060.001	M8*	1.000	53460.080.001

- Stabilized stainless steel 1.4571 is essentially a standard A4 stainless steel type with titanium.
- The addition of titanium is made to reduce the risk of intergranular corrosion (IC) after welding.
- 1.4571 is mainly applied in inaccessible constructions and constructions with moderate exposure to chloride and sulfur dioxide.
- Due to its titanium content it is not high-gloss polishable.

50540 Serrated lock washer with external teeth / Tandveerring met gesloten buitenvertanding / Rondelle élastique à dents chevauchantes extérieures **M11F**

- F = spring load in Newton at a deflection $s \approx 0.75 h_0$ ($h_0 = l_0 - t$).
- The values specified for t are nominal values. In the case of springs with $6 < t \leq 14$ the desired spring load F is to be obtained by reducing the thickness of single disc springs t to the values between brackets.
- Refer to EN 16984 for calculation of disc springs.
- Extensive technical data available on request.

7

- F = spring load in Newton at a deflection $s \approx 0.75 h_0$ ($h_0 = l_0 - t$).
- The values specified for t are nominal values. In the case of springs with $6 < t \leq 14$ the desired spring load F is to be obtained by reducing the thickness of single disc springs t to the values between brackets.
- Refer to EN 16984 for calculation of disc springs.
- Extensive technical data available on request.

- Disc springs acc. to » DIN 2093 A are mostly used in critical applications with safety first. Similar applications can be found in for example safety torque limiter clutches, hinge stiffeners and applications of constant roll pressure. Because of the right combination c.q. stacking of the disc springs the elasticity and/or deflection can be dosed accurately. The technical specifications of the disc springs above meet the highest expectations with reference to the static and dynamic load. Heat treatment gives a copper-bronze colour to this disc springs.
- D_e (h12) 8-10-12.5-14-16-18-20-22.5-25-28-31.5-40 X 12 CrNi 17 7 (Werkstoffnr. 1.4310).
- D_e (h12) 35.5-50-56-71 X 35 CrMo 17 (Werkstoffno. 1.4122).
- D_e (h12) 45 X 7 CrNiAl 17 7 (Werkstoffno. 1.4568).
- D_e (h12) 80-100 X 22 CrMoV 12 1 (Werkstoffno. 1.4923).
- F = spring force in Newton at a deflection $s = 0,75 h_0$ ($h_0 = L_0 - t$).
- D_e (h12)=40, $t=1$ ATTENTION: acc. to ≈ DIN 2993 C standardised: execution 'light'.
- For the calculation of disc springs, see DIN 2092.

Example of application

Shock absorber

Ball valve

Power switch

Material Stainless spring steel A2 (1.4310)

- The disc springs mentioned above acc. to ≈ DIN 2093 are suitable for general use. For more critical applications it is advised to choose disc springs from the article groups 36300, 36302, 36303 and 36450.
- Group 1: $t < 1,25$ from steel C67S
- Group 2: $1,25 \leq t \leq 6,0$ from steel 51 Cr V4 (edges of these disc springs are not machined).
- F = spring force in Newton at a deflection $s \approx 0,75 h_0 (h_0 = L_0 - t)$.
- Type A: execution heavy ($D_o/t \approx 18$).
- Type B: execution medium ($D_o/t \approx 28$).
- Type C: execution light ($D_o/t \approx 40$).
- If the type is not mentioned, the concerning dimension is not DIN standardised.
- For the calculation of disc springs, see DIN 2092.

36307	Disc spring / Schotelveer / Rondelle ressort	L07C
Material	Spring steel	
Surface treatment	Phosphated

- Disc springs are mostly used in critical applications with safety first. Similar applications can be found in for example safety torque limiter clutches, hinge stiffeners and applications of constant roll pressure. Because of the right combination c.q. stacking of the disc springs the elasticity and/or deflection can be dosed accurately. The technical specifications of these disc springs meet the highest expectations with reference to the static and dynamic load. They exceed the requirements of DIN 2093.
- Material group 1: $t < 1,25$ from steel Ck 67.
- Material group 2: $1,25 \leq t \leq 6,0$ from steel 50 Cr V4.
- Material group 3: $6,0 > t \leq 14,0$ from steel 50 Cr V4.
- Fatigue fractures can be largely prevented because the disc springs of material group 2 and 3 have machined edges.
- F = spring force in Newton at a deflection $s \approx 0,75 h_0 (h_0 = L_0 - t)$.
- For the calculation of disc springs, see DIN 2092.
- Extensive technical data available on request.

36450 Disc spring for critical applications / Schotelveer voor kritische toepassingen / Rondelle ressort pour applications critiques L07C

Material Steel Ck 67 Werkstoffnr. 1.1231

• F = spring load in Newton at a deflection $s \approx 0,75 h_0$ ($h_0 = l_0 - t$).
 • Extensive technical data available on request.

Example of application

36460 Bearing preload disc spring / Schotelveer voor lagers / Rondelle ressort pour roulements à billes **L07C**

Material Spring steel
Surface treatment Phosphated

- d_4 is the minimum required installation space.
- During assembly it is essential to not overspread the rings, a maximum spread of $1,01 \times d_1$ is recommended. For proper installation use pliers with spread limiter or assemble the aid of a cone.

- Other types of stainless steel than specified (but with equal properties) may be supplied at the discretion of the manufacturer.
- Avoid contact with chloride containing (cleaning-) liquids in order to reduce the risk of chloride induced stress corrosion cracking.

7

- d_4 is the minimum required installation space.
- During assembly it is essential to not over-compress the rings, a maximum compression of $0,99 \times d_1$ is recommended. For proper installation use pliers with spread limiter or assemble with the aid of a cone.

- Other types of stainless steel than specified (but with equal properties) may be supplied at the discretion of the manufacturer.
- Avoid contact with chloride containing (cleaning-) liquids in order to reduce the risk of chloride induced stress corrosion cracking.

Retaining washer for shafts

- The cap is made from zinc plated steel.
- Warning: electroplating of these products may cause hydrogen embrittlement.

Push-on fixing washer installation handle

Installatiegreep voor snelborgers / Appareil de pose pour bagues

- Application with magnetic ferrules, article groups 36251 and 36252.

36250	Push-on fixing washer installation handle / Installatiegreep voor snelborgers / Appareil de pose pour bagues	L07B

Type	☒	Art.number
HANDLE	1	36250.001.770

Magnetic ferrule for installation of push-on fixing washers

Magneethouder voor installatie van snelborgers / Appareil de pose porte aimants pour l'installation des bagues de fixation pour arbres

7

36251	Magnetic ferrule for installation of push-on fixing washers without cap / Magneethouder voor installatie van snelborgers zonder kap / Appareil de pose porte aimants pour l'installation des bagues sans capuchon	L07B

For shaft d ₁	☒	Art.number	For shaft d ₁	☒	Art.number	For shaft d ₁	☒	Art.number

6-8MM	1	36251.060.080	14-17MM	1	36251.140.170			

- These magnetic ferrules are to be used in combination with the installation handle, article group 36250.
- They facilitate the installation of push-on fixing washers, without cap, made of spring steel.
- Ferrules 6-8 mm can equally be used with push-on fixing washers with cap type 4A 4-5 mm, in spring steel as well as in stainless spring steel.
- Ferrules 9-11 mm can equally be used with push-on fixing washers with cap type 4A 6-9 mm, in spring steel as well as in stainless spring steel.
- Ferrules 12-13 mm can equally be used with push-on fixing washers with cap type 4A 10-11 mm, in spring steel as well as in stainless spring steel.

36252	Magnetic ferrule for installation of push-on fixing washers with cap type A / Magneethouder voor installatie van snelborgers met kap type A / Appareil de pose porte aimants pour l'installation des bagues avec capuchon type A	L07B

20	12	20	45	M5x20	50	14	50	80	M6x20

Special features of clamp-adjusting rings:

- Easy assembly and disassembly, precise positioning, very strong connection without clearance.
- Equal distribution of the clamping force over the circumference of the shaft, compensate for tolerance variations.
- They cause no damage to the shaft during assembly as shaft metal is not deformed.
- The clamp-adjusting rings are supplied with one hexagon socket head cap screw to ISO 4762 (DIN 912), class 12.9.

- During assembly it is essential to not overspread the rings, a maximum spread of $1,01 \times S_1$ is recommended. For proper installation use pliers with spread limiter or assemble the aid of a cone.
- Warning: electroplating of these products may cause hydrogen embrittlement.

Retaining ring internal, type NA2

Zekeringsring voor boringen NA2 / Bague de sûreté intérieure, type NA2

ASME B18.27

- During assembly it is essential to not over-compress the rings, a maximum compression of $0,99 \times S_1$ is recommended. For proper installation use pliers with spread limiter or assemble with the aid of a cone.
- Warning: electroplating of these products may cause hydrogen embrittlement.

Retaining ring external, type NA3 (E-type)

Zekeringsring voor assen NA3 (E-type) / Bague de sûreté extérieure, type NA3 (type E)

ASME B18.27

Assembly sequence

- Allowable load in kN at the largest possible screw diameter, (values in bold print), and a correct mounting of the wall plug in a supporting surface.
- When using chipboard screws, the values should be reduced by 30%.
- Because of the possible variation in joint quality, the values apply only to fixing operations in brick.

- Special features of MOLLY screw anchors:
- Ideally suited for cavity materials e.g. walls, building bricks, soft materials e.g. plasterboard, wood, chipboard, etc.
- Blind installation from one side with a screwdriver and key type MJ68 or handplier type BT2000.
- Permanent anchoring which can be used unlimitedly.
- Provided with pointed hooks preventing turning.
- Large contact area by spreader wings.

- DRIVA self-drilling anchors are made of Zamac 3 (zinc alloy), type TP 12 with zinc plated screws for back panels and type TF 27 with zinc plated countersunk screw.
- The named values are successively applicable for plasterboard 10 mm, plasterboard 13 mm and cellular concrete (6 mm pre-drill).
- The Allowable load (Nrec/Vrec) Includes the safety factor of 5 on the ultimate load.

Plasterboard fixing

Gasbetonplug / Cheville pour béton cellulaire

Technical Data

Type	GB8	GB10	GB14
Drill depth (min.)	60	65	90
Drill ϕ	8.00	10.00	14.00
Length (L) (mm)	50	55	75
Application in combination with:			
Screw ϕ	5	7	10
Allowable load (kN)			
Cellular concrete \geq P3.3 (GB3.3)	0.3	0.5	0.8
Cellular concrete \geq P4.4 (GB4.4)	0.4	0.6	0.9
Cellular concrete \geq PB2, PP2 (G2)	0.20	0.25	0.40
Cellular concrete \geq PB3.3 (GB3.3)*	0.3	0.5	0.3
Cellular concrete \geq PB4, PP4 (G4)	0.4	0.6	0.9

Assembly sequence

- * Tensile zone of cellular concrete roof- and ceiling panels acc. DIN 4223
- Allowable loads are valid for Fischer safety screws.
- For the design the complete approval has to be considered.

Concrete \geq C20/25	5.5	5.5	8.5	11.8	17.6

Assembly sequence

- Female threaded hammer-in anchor type GRIP SA can be installed with setting tool type S (see article group 70967).
- Allowable design load $N_{rd,c}$ (kN) for a single anchor in concrete C20/25 without influence of edge distances or other anchors.
- Allowable load includes the safety factor $\gamma_m = 1,5$, see approval.

Technical Data

Type / d	FHY M6	FHY M8	FHY M10
d _o	10	12	16
h _{ef}	30	35	40
Length (L) (mm)	37	43	52
Min. t _d	50	60	65
Structural part thickness (min.)	40	40	40
T _{inst}	10	10	20
Allowable load (kN)			
Concrete ≥ C45/55	2	2	3

Assembly sequence

- d_n = Nominal diameter of drill bit
- Min. t_d = Recommended drilling depth
- h_{ef} = Effective anchorage depth
- T_{inst} = Tightening torque in Nm. (screws for class 5.8 or A4-70).
- Allowable load (kN) for a single anchor in pre-stressed hollow-core concrete panels.
- For combinations of tensile loads, shear loads, bending moments as well as reduced edge distances or spacings (anchor groups) see approval.

- d = Drill diameter.
- M_{d (max.)} = Maximum allowable torque in Nm for assembly with an impact wrench.
- h = Minimum anchoring depth.
- h_(nom.) = Minimum hole depth.
- h_(min.) = Minimum hole depth.
- t_{fix} = Grip range.
- The allowable load is valid for one single anchor, at cracked concrete (tensile zone) with concrete class C20/25 and with the minimum anchoring depth.
- Final calculations should comply with the complete European Technical Approval (ETA 15/0352), this approval is also available on request.

- d_o = Nominal diameter of drill bit
- s = Width across flats
- ring ø = Washer diameter
- d_f = Diameter of clearance hole in the fixture
- h₁ = Recommended drilling depth
- h(nom) = Minimum hole depth
- h_{ef} = Effective anchorage depth
- S_{cr} N = Spacing characteristic
- C_{cr} N = Edge distance characteristic
- t_{fix} (max) = Grip range
- T_{inst} = Tightening torque in Nm
- N_{rec} = Recommended load in kN
- The allowable load is valid for one single anchor, at non-cracked concrete (pressure zone) with concrete class C20/25, incl. partial safety factor γ_f= 1,4 and if the S_{cr} N and C_{cr} N are taken in to account.

24/40	M24	24	158	-	253	230	36	40

- d = Nominal diameter of drill bit.
- Min. t_d = Advised drilling depth.
- h_{ef} = Effective anchorage depth.
- t_{fix} = Grip range.
- kN = Recommended load in kN.
- The allowable load is valid for 1 separate anchor, for cracked concrete (tensile zone) in the class C20/25, incl. partial safety factor $\gamma_f = 1,4$ and when the Scr, N and Ccr, N are not exceeded.
- For the final calculations, it is mandatory to take into account the entire European Technical Approval (ETA), which is available on request.
- ETA option only for M8-M20

- Code = Letter code marking.
- d_o = Nominal diameter of drill bit.
- T_{inst} = Tightening torque in Nm.
- d_f = Diameter of clearance hole in the fixture.
- h_{min.} = Minimal thickness of concrete member.
- h_o = Recommended drilling depth
- h_{ef} = Thickness of the fixture.
- t_{fix} = Effective anchorage depth.
- S_{cr} N = Spacing characteristic.
- C_{cr} N = Edge distance characteristic.
- S_{min.} = Minimal spacing.
- C_{min.} = Minimal edge distance.
- N_{min.} = Allowable load in kN.

- The allowable load is valid for one single anchor, at non-cracked concrete (pressure zone) with concrete class C20/25, incl. partial safety factor $\gamma_f = 1.4$ and if the S_{cr} N and C_{cr} N are taken in to account.
- When reduction on spacing and edge distance take place a re-calculation of forces should be carried out by making use of the technical guide or calculation software, they are available on request.
- Final calculations should comply with the complete European Technical Approval (ETA), this approval is also available on request.

- **Code** = Letter code marking
- **d_o** = Nominal diameter of drill bit
- **d_f** = Diameter of clearance hole in the fixture
- **h₁** = Depth of drilled hole to deepest point
- **h_{nom}** = Minimum hole depth
- **h_{ef}** = Effective anchorage depth
- **t_{fix}(max)** = Grip range
- **s** = Width across flats
- **ring ø** = Washer diameter
- **S_{cr}, N** = Spacing characteristic
- **C_{cr}, N** = Edge distance characteristic
- **S_{min.}** = Minimal spacing
- **C_{min.}** = Minimal edge distance
- **N_{rec}** = Recommended load in kN
- **T_{inst}** = Tightening torque in Nm
- The allowable load (N_{rec}) is valid for one single anchor, at non-cracked concrete (pressure zone) with concrete class C20/25, incl. partial safety factor $\gamma_f = 1,4$ and if the S_{cr}, N and C_{cr}, N are taken in to account.
- When reduction on spacing and edge distance take place a re-calculation of forces should be carried out by making use of the technical guide, they are available on request.
- Final calculations should comply with the complete European Technical Approval (ETA), this approval is also available on request.

Final calculations should comply with the complete European Technical Approval (ETA), this approval is also available on request.

Bolt anchor

Buitendraadanker / Cheville type FZA

Technical Data

Type	FZA 12x40 M8/15	FZA 12x50 M8/15	FZA 14x40 M10/25	FZA 14x60 M10/25	FZA 18x80 M12/25
Diameter (d-D)	M8	M8	M10	M10	M12
Drill depth	40	50	40	60	80
Drill ø (type FZUB)	12x40	12x50	14x40	14x60	18x80
Grip range (max.)	15	15	25	25	25
T _{inst}	20	20	40	40	60
Allowable load (kN)					
Concrete ≥ C20/25	2.4	4.3	2.4	5.7	9.5

Assembly sequence

- T_{inst} = Tightening torque in Nm
- High permissible for assembly in tension zones!
- The allowable load is valid for one single anchor, at cracked concrete (tensile zone) with concrete class C20/25, incl. partial safety factor $\gamma_f = 1.4$.
- When reduction on spacing and edge distance take place a re-calculation of forces should be carried out by making use of the technical guide or calculation software, they are available on request.
- Final calculations should comply with the complete European Technical Approval (ETA), this approval is also available on request.

Final calculations should comply with the complete European Technical Approval (ETA).
This approval is also available on request.

- **C_{cr}, N** = Characteristic Edge distance (tensile).
- **C_{min}** = Minimum edge distance (tensile).
- **d_f** = Hole diameter in fixture.
- **d_o** = Hole diameter in substrate.
- **h_{ef}** = Effective embedment depth.
- **h_{min}** = Minimum substrate thickness.
- **h_o** = Minimum hole depth.
- **S_{cr}, N** = Characteristic spacing.
- **Concrete C20/25; recommended load for non-cracked concrete.**
- The allowable load is only valid for AcryMaxx Chemical Mortar in combination with Anchor studs, steel grade 5.8.
- The allowable load is valid for one single anchor, at cracked concrete (tensile zone) with concrete class C20/25, incl. partial safety factor $\gamma_r = 1,4$ and if the S_{cr} , N and C_{cr} , N are taken in to account.
- Final calculations should comply with the complete European Technical Approval (ETA), this approval is also available on request.

Spacing (S_{cr} , N). characteristic	110	140	290	390	420

Assembly sequence

8

- The allowable load is valid for one single anchor, at non-cracked concrete (pressure zone) with concrete class C20/25, in combination with bolt class 5.8 and if the S_{cr} , N and C_{cr} , N are taken in to account. When reduction on spacing and edge distance take place a re-calculation of forces should be carried out.
- For a complete chemical fixing, the resin capsule and internal threaded anchor have to be ordered separately. Setting tool is enclosed in each packing.
