4	0.6	4	20	3	20
5	0.75	5	25	4	25
6	0.9	6	30	4.5	32

- Parallel pins are designed for the fastening of two or more individual elements. A friction type connection can be achieved by the selection of suitable fits. If such connection is meant to be disconnected repeatedly, then it becomes preferable to use taper pins in accordance with DIN 1.
- d x L: The nominal length (L) does not include the rounded ends.

- Taper pins are designed for the friction type fastening and/or locking together of two or more individual elements. The tapered shape allows the connection to be disconnected repeatedly, and when the elements are joined together again, their location remains as accurate as it was previously, and the frictional connection remains as strong as before.
- The nominal length (L, tolerance class js15) does not include the rounded ends.
- For taper pins with d₁ = 20 distance W is at the choice of the user.

- V = minimum shear strength double shear in kN (valid for steel pins only).
- Diameter d₂ is the diameter over the grooved edges (valid for steel pins only).
- The recommended tolerance class for the accommodating hole diameter d (nominal) is H11.
- The nominal length (L, tolerance class js15) does not include the rounded ends.

Examples of application

4	h11	0.5	4.25	4	10.6	12	h11	1.6	12.4	12	91

- V = minimum shear strength double shear in kN (valid for steel pins only).
- Diameter d₂ is the diameter over the grooved edges (valid for steel pins only).
- The recommended tolerance class for the accommodating hole diameter d (nominal) is H11.
- The nominal length (L, tolerance class js15) does not include the rounded ends.

4	h11	0.4	4.25	1.8	4	10.6							

- V = minimum shear strength double shear in kN (valid for steel pins only).
- Diameter d₂ is the diameter over the grooved edges (valid for steel pins only).
- The recommended tolerance class for the accommodating hole diameter d₁ (nominal) is H11.
- The nominal length (L, tolerance class js15) does not include the rounded ends.

Examples of application

- V = minimum shear strength double shear in kN (valid for steel pins only).
- Diameter d₂ is the diameter over the grooved edges (valid for steel pins only).
- The recommended tolerance class for the accommodating hole diameter d₂ (nominal) is H11.
- The nominal length (L, tolerance class js15) does not include the rounded ends.

- Diameter d₁ is the diameter over the grooved edges (valid for steel pins only).
- The recommended tolerance class for the accommodating hole diameter d₁ (nominal) is H11.
- The tolerance class of the nominal length (L) is js15.

- Dimensions d and d2 in above table are before mounting.
- V = minimum shear strength, double, in kN.
- The recommended tolerance class for the accommodating hole diameter d (nominal) is H12.

Special features of coiled spring-type straight pins (spiral pins):

- These pins are used for connections or the positioning of two or more parts and may also be used as shafts and hinge-, stop- or carrierpins, and are easily disassembled.
- Thanks to their spiral shaped cross section (approximately 2.1/4 coils) these pins are very flexible and suitable for repeated use with dynamic loads. Equal stress distribution throughout their cross section against the hole wall produces a good press fit, which can absorb shear forces unaffected by the direction.
- The pins are chamfered at both ends, so they can easily be inserted and installed automatically.

Examples of application

9

39140	Spring-type straight pin (spiral pin) coiled, standard duty / Spiraalspanbus normale uitvoering / Goupille élastique spiralisée, série moyenne				L09A
Material	Spring steel 420-545 HV30

- Dimensions d1 and d2 in above table are before mounting.
- The type of austenitic stainless spring steel is at the manufacturer's discretion and may vary from the steel types stated in ISO 3506.
- V = minimum shear strength, double, in kN.
- The recommended tolerance class for the accommodating hole diameter d (nominal) is H12, except for d < 1,2, where H10 is recommended.

Special features of coiled spring-type straight pins (spiral pins):

- These pins are used for connections or the positioning of two or more parts and may also be used as shafts and hinge-, stop- or carrierpins, and are easily disassembled.
- Thanks to their spiral shaped cross section (approximately 2,1/4 coils) these pins are very flexible and suitable for repeated use with dynamic loads. Equal stress distribution throughout their cross section against the hole wall produces a good press fit, which can absorb shear forces unaffected by the direction.
- The pins are chamfered at both ends, so they can easily be inserted and installed automatically.

- Dimensions d1 and d2 in above table are before mounting.
- V = minimum shear strength, double, in kN.
- The recommended tolerance class for the accommodating hole diameter d (nominal) is H12.

Special features of coiled spring-type straight pins (spiral pins):

- These pins are used for connections or the positioning of two or more parts and may also be used as shafts and hinge-, stop- or carrierpins, and are easily disassembled.
- Thanks to their spiral shaped cross section (approximately 2.1/4 coils) these pins are very flexible and suitable for repeated use with dynamic loads. Equal stress distribution throughout their cross section against the hole wall produces a good press fit, which can absorb shear forces unaffected by the direction.
- The pins are chamfered at both ends, so they can easily be inserted and installed automatically.

21	21.5	21.9	2	17.5	2	168

- Dimensions d₁ and d₂ in above table are before mounting.
- For pins with a nominal diameter d ≥ 10 mm a single chamfer configuration is optional at the discretion of the manufacturer.
- The type of austenitic stainless spring steel is at the manufacturer's discretion and may vary from the steel types stated in ISO 3506.
- V = minimum shear strength, double, in kN (valid for steel pins only).
- The recommended tolerance class for the accommodating hole diameter d (nominal) is H12.

Special features of slotted spring-type straight pins:

- These pins are used to connect two or more construction elements to each other.
- They are highly suitable to absorb shear forces.

- Dimensions d₁ and d₂ in above table are before mounting.
- For pins with a nominal diameter d ≥ 10 mm a single chamfer configuration is optional at the discretion of the manufacturer.
- V = minimum shear strength, double, in kN.
- The recommended tolerance class for the accommodating hole diameter d (nominal) is H12.

Special features of slotted spring-type straight pins:

- These pins are used to connect two or more construction elements to each other.
- They are highly suitable to absorb shear forces.
- If these pins are employed with bolted joints the below arrangement should be used:

d (nom.) spring-type straight pin	6	8	10	12	16	18
intended for drill size	M3	M4	M5	M6	M8	M10
associated washers in DIN 7349	3,2	4,3	5,3	6,4	8,4	10,5

- Dimensions d₁ and d₂ in above table are before mounting.
- For pins with a nominal diameter d ≥ 8 mm a single chamfer configuration is optional at the discretion of the manufacturer.
- The recommended tolerance class for the accommodating hole diameter d (nominal) is H12.

Special features of slotted spring-type straight pins:

- These pins are used to connect two or more construction elements to each other.
- They are highly suitable to absorb shear forces.
- If these pins are employed with bolted joints the below arrangement should be used:

d (nom.) spring-type straight pin	6	8	10	12	16	18
intended for drill size	M3	M4	M5	M6	M8	M10
associated washers to DIN 7349	3,2	4,3	5,3	6,4	8,4	10,5

51428 Spring-type straight pin slotted, heavy duty, stainless spring steel / Spanbus zware uitvoering, RVS / Goupille élastique fendue, épaisse, acier à ressort inoxydable R09A

Material Stainless spring steel

- The shape of the split pin ends are at the manufacturer's discretion.
- For stainless steel split pins the type of austenitic stainless steel is at the manufacturer's discretion and may vary from the steel types stated in ISO 3506.
- The recommended tolerance class for the accommodating hole diameter d (nominal) is H13 for d ≤ 1,2 mm and H14 for bigger diameters.
- The tolerance class of the nominal length (L) is js17.

9	30	45	8	28	110	55

Assembly data

For the hole diameter, d₁ (nominal), tolerance class H13 is recommended.
It is also recommended to connect the spring cotter pin with the unit to be locked so that it cannot be lost.

Bright key steel length 1 meter

Blank spieënstaal lengte 1 meter / Acier étiré pour clavettes longueur 1 mètre

DIN 6880

- Bright key steel is descaled, cold drawn steel with a relatively smooth surface and correspondingly high dimensional accuracy, and is intended for the production of parallel- and gib head keys.
- For square key steel the tolerance class for both dimension b and h is h9. For rectangular key steel the tolerance class for dimension b is h9 and for dimension h it is h11, with the exception of the sizes 10X8, 12X8 and 12X10, for which it is h9.

- (1.) Values are valid when woodruff keys are used to transmit the entire torque.
- (2.) Values are valid when woodruff keys are used for positioning only and forces are transmitted through other means, e.g. parallel keys or taper pins.

• Warning: electroplating of these products may cause hydrogen embrittlement.

U39101 Spring-type straight pin slotted ASME / Spanbus ASME / Goupille élastique ASME X20A

Material	Spring steel SAE 1070
Surface treatment	Zinc plated

Torque (Nm)	23	23	23	45	45	45	80	80	80	190	190	190	300	300	300

Assembly sequence

Safe w.l.1 = Safe working load tensile (5:1) (kN).

Safe w.l.2 = Safe working load single shear (5:1) (kN).

The hexagonal Hollo-Bolt is simply inserted, through the steelwork (cone end first), in a pre-drilled hole. Grip the Hollo-Bolt collar with an open-ended spanner, and using a calibrated torque wrench, tighten the hexagonal bolt to the torque given by the table above.

The recommended tightening torque creates a limited clamping load in the assembly, the connection may not be compared with a regular bolt/nut assembly.

Before tightening, ensure that the materials that are to be connected together are touching.

Extensive information is available on the Lindapter website.

The Flush Fit Hollo-Bolt is simply inserted, through the steelwork (cone end first), in a pre-drilled 90° countersunk hole. For installation use the special flush fit tool article 61949. Grip the Hollo-Bolt installation tool with an open-ended spanner, and using a calibrated torque wrench, tighten the hex socket screw to the torque given by the table above.

The recommended tightening torque creates a limited clamping load in the assembly, the connection may not be compared with a regular bolt/nut assembly. Before tightening, ensure that the materials that are to be connected together are touching.

High friction clamp

Klem voor hoge schuifweerstand / Crapaud de fixation anti-glisement

High slip resistance clamp, hooks over the flanges of beams, angles and channels.
Suitable for parallel and tapered flanges, incline max. 8°. Can be combined with types AF and AAF when used with 8.8 bolts.
Extensive information is available on the Lindapter website.

Flush clamp

Flush klem / Crapaud type Flush

Technical Data

Nom. size	M16
Flange thickness/adjustability	5-19
Flange width/adjustability	75-180
Max. load (5:1) (kN)	30
Tightening torque (Nm)	147

Example of application

The Flush Clamp is an adjustable steelwork connection that clamps the flanges of two steel beams together without the use of a location plate. This assembly forms a clamp that is suitable for connecting beams of varying flange widths and thicknesses.

The Flush Clamp is supplied as a set, containing 4 each of six basic components: special body, special bolts, special washers, flat washers, hexagon nuts and thin nuts.

Extensive information is available on the Lindapter website.

JS500 is a topcoat that significantly improves the corrosion resistance of zinc-electroplated parts.

The FGRS Plus clamp is a one-piece hinged pipe clamp with patented rapid locking and readjusting mechanism.

Advantages

- The rapid locking mechanism allows a fast and time-saving installation with one hand.
- The hinged pipe clamp can open wide for easy insertion of the pipe.
- Time and energy saving insertion of the pipe in overhead installation.
- Fit for fastening pipe lines to walls, ceilings and floors in the sanitary and heating area.

Properties

- Material: steel DC01 (1.0330) to EN 10130.
- Corrosion protection: 5-9 µm zinc plated.
- Connecting nut: resistance welded, M8.
- Locking screw: screw with combi slot/cross recessed pan head.
- Sound insulation insert material: SBR/EPDM, chlorine- and silicone free.
- Sound insulation: for DIN 4109.
- Temperature range: -40 °C to +100 °C.
- Hardness: 55±5° Shore A.
- Fire behavior: DIN 4102 group B2.

The FRS Plus clamp is a one-piece hinged pipe clamp with patented rapid locking and readjusting mechanism.

Advantages

- The rapid locking mechanism allows a fast and time-saving installation.
- The safety latch fastening guarantees pipe installation without the clamp springing open.
- Time and energy saving insertion of the pipe in overhead installation.
- Fit for fastening pipe lines such as heating, sanitary and waste water pipes, to walls, ceilings and floors.
- The combination connecting nut with M 8 and M 10 thread enables optimised mounting choices.

Properties

Material: steel DC01 (1.0330) to EN 10130.
Corrosion protection: 5-9 µm zinc plated.
Connecting nut: resistance welded, combined M8/M10 threaded.
Locking screw: screw with combi slot/cross recessed pan head.
Sound insulation insert material: SBR/EPDM, chlorine- and silicone free.
Sound insulation: for DIN 4109.
Temperature range: -40 °C to +100 °C.
Hardness: 55±5° Shore A.
Fire behavior: DIN 4102 group B2.

TKL ø9	50	64275.090.001						

The TKL Clamp hanger makes simple fastening possible by clamping to steel girders.

Advantages:

- The solid design guarantees a high load-bearing capability.
- Simple and fast level adjustment, the TKL with through-hole allows for height adjustment after installation.
- Easy fastening on steel girder without welding or drilling.
- The design of the clamping screw prevents it from slipping from the steel girder.
- For fastening pipe lines, ventilation lines and sprinkler lines on steel girders.

Properties:

- Material: Malleable cast iron EN-GJMB-350-10 to DIN 1562
- Corrosion protection: 5 µm minimal zinc plated.
- Hex set screw to ISO 4017 class 8.8, lock nut to ISO 4035 class 04.

Perforated steel banding

Montageband / Bande de suspension perforée

Technical Data

Type	B	Eye diameter	Length (mtr)	S
LBV 17	17	6.5	10	0.75
LBV 26	25	8.5	10	0.88

To be fastened with: ED 15; ED 18; ED 22.

Assembly sequence

- Simple cutting to size possible with steel metal shears.
- Floor fastening using the Fischer Impact wall ED.
- For ceiling suspension in concrete, the Fischer wall anchor FMA II is recommended.

10

Material: Steel
Surface treatment: Zinc plated

Type	Art.number	Type	Art.number
17 (ROLL, 10 MTR)	64272.170.001	26 (ROLL, 10 MTR)	64272.260.001

Perforated steel strap for easy installation.

Advantages:

- Affordable easy installation possible.
- Universal mounting possible.
- Flexible in choosing lengths.
- Suitable for fixing pipelines on the floor or hanging them from the ceiling.

Properties:

- Material: Steel DX 51 D+Z (1.0226) according to EN 10327.
- Corrosion protection: at least 7 µm zinc plated.

DPF 60-105	50 64270.060.105

Fastening element for installation of two parallel pipe lines with just one fastening point.

Advantages:

Only one fastening point for two pipe lines.

The rounded design of the connector plate is ideal for a visual installation.

The two-part double connector plate DPP is suitable for variable pipe spacing.

The base plate's long slots allow the double connector plate to be easily aligned.

Fit for fastening parallel pipe lines on the wall.

Properties:

Material: Steel DC01 (1.0330) to EN 10130.

Corrosion protection: 5-9 µm zinc plated.

F max = Maximum recommended static load (values do not apply to stainless steel)

These spherical washers are often combined with conical seats to DIN 6319-D or DIN 6319-G. The combination enables a swing of approximately 3° in any direction to be attained, when positioning a bolt through.

ATTENTION: When these washers are applied in combination with fasteners in class 10.9 or 10, the maximum allowable clamping load is at 46% of the yield strength Rp0.2; for fasteners in class 8.8 or 8 the maximum is at 66% of the yield strength Rp0.2

Do not apply conical seats to DIN 6319-D with slotted holes, but use conical seats to DIN 6319-G for this purpose

Screw insert type C

Insert type C / Douille taraudée C

Technical Data

d	Drill ø	m ₁	P	d	Drill ø	m ₁	P
M3	4.60	5	0.50	M5	6.60-6.70	6	0.80
M4	5.50-5.70	5	0.70	M6	7.60	7	1.00

Special features of screw inserts type C:

They are highly suitable to provide soft materials like plastic, wood, chipboard and aluminium with strong ISO-metric thread in a fast and efficient way. During assembly the teeth are anchoring into the wall of the hole. The connection is selflocking against vibrations and shocks. Type C with one row of teeth is recommended for low forces and less frequent disassembly. It is recommended that the exact pilot hole diameter selection is made on basis of tests.

d₂ = Nominal diameter of drill bit.

t_{fix} = Grip range.

Min. t_d = Recommended drilling depth.

These anchors are not intended for heavy duty structural applications.

Oversized hot dip galvanized nuts are manufactured with thread tolerance class 6AZ and mate with externally threaded parts (bolts, threaded rods) that are manufactured with thread tolerance class 6g before coating. As the nut thread is tapped after galvanizing the threads are not coated. The corrosion resistance however is not influenced disadvantageously as the thread will be protected by the zinc layer of the mating part.

Special features of ABA hose clamps:

- with the BLUE one piece pressed housing (ABA patent)
- rolled-up band edges, no damage of the hose
- smooth band underside that protects the hose
- easy to install and to loosen due to the hexagon slotted head
- re-scalable

Flexible socket screwdriver

Flexibele schroevendraaier / Tournevis flexible

30669 MAXXFAST Flexible socket screwdriver / MAXXFAST Flexibele schroevendraaier / MAXXFAST Tournevis flexible			MT2A
			

Size	☒	Art.number
7 MM	1	30669.000.100

- Flexible screwdriver with 7 mm hex drive for MaxxFast hose clamps.
- Compatible with Euro standard hose clamps.
- High grip ergonomic bi-material handle for comfort and high torque transmission.
- Flexible axial shaft for easy installation or removal even in tight areas.
- Thin wall socket designed for standard hose clamps (S = 7 mm).

43030 ABA Flexible socket screwdriver / ABA Flexibele schroevendraaier / ABA Tournevis flexible			Y95A
			

Type	☒	Art.number	
Flex	1	43030.001.770	Normal model
Flex long	1	43030.001.780	Long model 600 mm

- For areas where access is difficult.
- Provided with a 7 mm hexagon socket, cannot slip out.
- Bendable to 90°.
- Usable for all types of ABA and AWAB hose clamps.

RA 800/M16	182	216	M16	144	14	46	12.748

- Domed steel cover zinc plated, vibration isolation material natural rubber (NR) 60° IRH and steel footplate with a Bonderte® Black coating.

Special features of mountings type RA:

- suitable for the effective isolation of vibration and noise on different machines with rotating movements, like compressors, combustion engines, generators, converters, pumps, industrial and marine gensets, fans, for use with presses, punches and other workshop machines.
- filled as standard with an integral full-scale design device with resilient stop.

- Domed steel cover zinc plated, vibration isolation material natural rubber (NR) 60° IRH and steel footplate with a Bonderite black coating.

Special features of FABORY mountings type RAEM:

- For applications demanding maximum isolation.
- Suitable for the effective isolation of vibration and noise on different machines with rotating movements, like compressors, AC units, industrial fans, generators, combustion engines, emergency power sets, large milling machinery, industrial and marine gensets, refineries and defibrators.
- Filled as standard with an integral fail-safe design device with resilient stop.

- Domed steel cover zinc plated, vibration isolation material rubber (NR) 60° IRH and steel footplate with a Bonderite® black coating.

Special features of mountings type RAB:

- optimum stiffness characteristics and horizontal stability
- especially effective on small 1, 2 and 3 cylinder diesel engines
- fitted as standard with an integral fail-safe design device with resilient stop

Anti-vibration plate

Anti-trilmat / Plaques anti vibration caoutchouc

Technical Data

Size	Diameter (mm)	Height (mm)	Length (L) (mm)	Max. compression load (N)	Vertical stiffness (kg)	Width (mm)
30	30	10	-	350	60	-
43	43	10	-	700	130	-
73	73	10	-	2.000	360	-
500x500	-	10	500	125.000	22.000	500

- Special features of anti-vibration plates:
- Intended, primarily, for applications with low demands on vibration isolation.
- If insufficient deflection is achieved by a single layer, multiple layers can be used
- Oil and grease resistant rubber material.
- Max. allowable compr. load in N/cm² = 50.

Examples of application

- Steel class 8.8 with rubber NBR profile.
- The adjustent bolt is up to and including type T20 with a square head bolt, above type T20 with a hexagon head bolt.
- Static load per flexible machine support in kN.
- Dynamic load per flexible machine support in kN for presses, max. number of strokes are stated per minute.
- Other sorts of rubber and/or hardness or longer adjustment bolts are available on request.

- Bush type VP designed to accommodate torsional movements and axial and radial loads.
- Consists of two concentric sleeves with rubber securely bonded between them.

- Specific features of grommets:
- Protect electric wire in sheet iron.
- Excellent insulation.
- Strong and safe.
- Reducing vibration.

- (1) 19x19 mm PA 6.6 cable tie mounts for cable ties up to 3,6 mm wide. 28x28 mm PA 6.6 cable tie mounts for cable ties up to 4,8 mm wide. Available in white or UV resistant black. High performance self adhesive rubber backing for quick and easy installation. Can alternatively be attached with a screw.
- (2) PA 6.6 cable tie mounting plug available in UV resistant black. To install, simply drill a hole (diameter: 7mm - depth: 40 mm) in the masonry and drive in the plug with a hammer. For cable ties up to 9 mm wide.
- (3) PA 6.6 cable tie mounting block available in UV resistant black. Installed with a simple screw. For cable ties up to 4,8 mm wide.

- Specific features of protective buffers:
- Soft yet very strong flexible buffer.
- For assembly in iron work, sliding facades and such.
- Low buildingheight and tight neat finish
- Simple assembly with single screw connection or drive rivet

- Specific features of slide bearings:
- Manufactured out of self-lubricating nylon 6.6 and designed with buffercollar
- Insensitive to dirt, weatherinfluences and most chemicals
- Extremely fit for soundless hinges, low R.P.M. machines
- Also electric insulating between axle and bearinghouse
- Suitable for h6-H7 fitting
- After assembly bearing clearance approx 1% of the shaft diameter

- Accurate cylindrical plug with a good sealing.
- For sealing of temporary drill holes or screwthread holes but also for lengthy protection.
- Great clampability, therefore utmost reliable also in difficult situations.

56780 Cover plug / Afdichtstop / Bouchon de fermeture

- The tapered design of these products allows them to be used as either a cap or a plug, providing easy fitting and removal in most applications, they provides excellent protection against damage, dirt, moisture and corrosion, during storage and transportation.
- When used as a plug dimension b should be min. 5% larger than the opening, diameters over 30mm may require more interference.
- When used as a cap dimension c should be min. 5% less than the diameter to be capped, diameters over 30mm may require more interference.

- LOCK blind rivets provide a high clamping load with thin sheet applications.
- Their large head diameter and broad secondary flange ensure permanent clamp.
- For quick and easy installation the LOCK blind rivets are provided with a unique tapered hole seeking tip.

- Structural blind rivets combine high tensile- and shear strength with good hole filling capacity that compensates oversized, slotted or misaligned holes.
- These rivets are vibration resistant and feature permanent mandrel retention, which avoids rattling.
- The large back side bearing area provides good spreading of the clamping load.

- P-LOCK blind rivets combine high tensile- and shear strength with a multigrip clamping range, excellent resistance to vibrations and a good watertight connection.
- These rivets require to be set with a special nose piece.
- The minimal required setting force for the P-LOCK blind rivets is 13,5 kN.

Self-clinching blind stand off

Inpers afstandsteun, gesloten / Colonette borgne à sertir, aveugle

Technical Data

d x C	Hole size	Min. distance sheet edge	Min. recommended sheet thickness	S
M3x4.18	4.2	6	1	4.8
M3x5.39	5.4	6.8	1	6.4
M4x7.1	7.2	8	1.3	7.9
M5x7.1	7.2	8	1.3	7.9

- Steel self-clinching blind stand offs are suitable for use in steel sheet with a maximum hardness of HRB70.
- For steel sheets with higher hardnesses, rivet bushes are recommended.

- The prevailing torque type wire thread insert achieves its locking ability, between bolt and AMECOIL, by polygonal deformation of one or more spirals of the wire thread insert
- These prevailing torque type wire thread inserts are painted red to easily distinguish them from the standard type.

This plastic workshop kit is convenient for the frequent use of one size.

Contents:

- Unidimensional manual fitting tool.
- Machine tap (for diameters \geq 5/8 UNC with extra starter tap).
- Tang break tool.
- Stainless steel A2 wire thread inserts (quantities between brackets).

- Tool exclusively for machine insertion or manual insertion (with the aid of a tap wrench or an open-ended spanner) of self-tapping thread inserts with hexagonal socket types 302 2 and 308 2.
- d₁ = tool fit for this inner diameter of the insert.
- s = nominal socket width across flats of the insert.
- G = drive square width across flats.

71580		Tool type 6102 for self-cutting threaded inserts with hexagon socket / Gereedschap type 6102 voor zelfdraadsnijdende schroefdraadbus met binnenzeskant / Appareil de pose type 6102 pour douilles filetées autotaraudeuses à six pans creux		S94A

Advantages of the hand- and machine tool for self-cutting threaded inserts with hexagon socket:

- The insert doesn't have to be screwed onto the tool: saves up to 50% assembly time.
- The insert can simply be assembled with this tool: use with tap wrench or with screw machine.
- The insertion tool only needs to turn clockwise.
- The insert is easily removed by unscrewing.

Tool type 620 for self-cutting threaded inserts

Gereedschap type 620 voor zelfdraadsnijdende schroefdraadbus / Appareil de pose type 620 pour douilles filetées autotaraudeuses
